Less driving, faster deliveries: Omniva opens its first MicroHUB in Tallinn

29.10.2026

International technology and logistics group Omniva has opened its first MicroHUB in Tallinn, reducing van journeys in the city. The solution saves couriers time and helps parcels reach customers faster while supporting greener urban logistics – fewer vans, more cargo bikes.

A MicroHUB is a specially adapted container equipped with security systems and located within a courier's delivery area. Couriers can pick up additional parcels during their rounds without making

FORUM VIRIUM HELSINKI

Based on Omniva's experience, cargo bikes can be 25–30% more efficient than vans in dense urban areas, while producing significantly less noise and fewer emissions. By keeping the next load of parcels nearby, MicroHUBs help couriers make the most of these advantages.

The first MicroHUB is located at Ristiku 10, in an area with a daily volume of around 700–900 parcels.

"Our initial estimates suggest that a MicroHUB could save each courier up to three hours a day and allow them to serve around 20 additional customers.
